

Digital Zines

- Created on computers and/or tablets
- Print versions are sometimes available, but are generally not the primary way the zine is intended to be consumed
- Procreate can be used to give the zine a more zine-traditional, handwritten vibe
- Adobe InDesign is the standard choice for typesetting and layout, for more “polished” zines
- Lots of room for open source tooling expansion
- LaTeX, though less commonly used, is a really good tool for building digital zines
